This webpage describes using the open-source ExifTool software and a separate open-source add-on program, the ExifToolGUI

(Graphical User Interface), to.. How to you specify the path to it 2 The main reason I am interested in this tool is that I want to create Exif datafor TIFF files from a scanner.. Here are the steps:1) Using your favourite browser (ie Safari), download the latest version of exiftoolfrom http://owl.. Whichever is easiest for you 5) ExifTool should work on MRW images from any Minolta camera.

exiftoolgui alternative

phy queensu ca/~phil/exiftool/ to your desktop 2) Open a terminal window (by running 'Terminal' from the /Applications/Utilities folder).. 66 The exiftool files have to be moved to the parent directory ie)Also, there was some confusion about my terminal session.. I'll correct this oversight Looking at some of the other posts with references to excel etc.. Here are the steps:1) Using your favourite browser (ie Safari), download the latest version of exiftoolfrom http://owl.. I'm sorry, it's my fault Expanding the distribution in the /usr/local/bin directory created a subdirector called Image-ExifTool-6.. I would appreciate tutoringas my real work is photography and not computer programming.. The app is developed by Phil Harvey ExifToolGUI is graphical interface developed for the ExifTool software application.. I am a hybrid shooter as in addition to the Dynax 7, I own a Minolta Dynax 7D and a Dimage A2.
